

Lose Centimeters With Ceccarelli Fat Lipolysis

I began my journey with [Ceccarelli](#) a while ago, in my quest to lose weight. It is a brand new "**innovative fat lipolysis Mesotherapy solution**". It was formulated by Professor Ceccarelli, who is a regenerative, and physiological scientist in Rome. Basically, it uses the Fenton reaction to re-sculpt the body and the face.

A solution of Vitamin C and iron is mixed in a laboratory, and is then administered by a doctor. For 3 days prior to beginning my treatment, I drank at least 10 glasses of water a day, and took milk thistle tablets 3 times daily. I will continue to do this for at least another week. I was feeling a little anxious about how painful it would be having injections into my stomach, and as to whether there would be any side effects.

Thank goodness, I was pleasantly surprised, as the numerous injections were not painful at all. The assistant put ice on the injected areas, and this was really soothing. I had been warned about bruising, and by the time I got home, some of the bruises were visible. Later on today I am going to lie under the lights at [Skin Renewal](#), which will help with the bruising. They are also going to take my measurements.
