

## DO PEELS REALLY THIN YOUR SKIN?

Chemical peels thin and thicken your skin, but in the right places. It will thin the skin where it is supposed to be thin and compact (outer layer) and thicken the skin (middle layer) where it is supposed to be thick and plump.

Another great benefit of a thinner epidermis is that skin care products can penetrate the skin more effectively, resulting in a more even skin tone and fewer visible fine lines, thus resulting in a more youthful appearance.
